# A Beginner's Overview Of Business Telephone Systems

Posted on August 24, 2012 by Arthur T. Dawley

Nowadays, the secret to the success of many thriving companies is the use of VOIP small business telephone services. They perform many vital functions: they keep a workplace organized, they allow employees to be in constant contact, and they make it easy for employees to transfer customers' calls to the right recipients. We've written this article to enlighten the uninitiated to the many perks of the VOIP set-up. With any luck, once you've read through this article, you will receive our message loud and clear and switch your company over to VOIP.

VOIP small business telephone services are nothing if not delightfully un-complicated. The long version of "VOIP" is "voice over internet protocol"; in other words, telephone calls conducted over the Web. Unlike old-fangled phone systems, the VOIP set-up can transmit hundreds of simultaneous calls using just one IP connection. Those who use VOIP are free from the hassle of piles of bills and time-consuming multiple-wire installations. It's very easy and inexpensive to set up a VOIP system, and it takes no time at all.

There are more benefits to business telephone systems than the cheap, easy installation. Because they operate via an internet connection, it requires almost no more energy to make an international phone call than it does to make a local one. A ten-person conference call between Tokyo and Dallas is on the same level as a two-person call between two adjacent buildings. VOIP users can usually contact one another for free from anywhere in the world.

The internet connection employed by business telephone systems can carry information in many different forms. Anything, including email, texts, voicemail, phone calls, and fax, can usually be transmitted via the trusty VOIP address. Often it is even possible to link up office phones to the cell

phones of employees using the VOIP system. This cuts down dramatically on the price of equipment maintenance, not to mention the cost of energy!

For 21st century business owners, efficiency and state-of-the-art technology are really quite crucial. Now more than ever, it's vital to save money and time at every opportunity. You can easily accomplish both these tasks by switching over to VOIP – with its low rates and its wonderfully simple set-up, you'll get the benefits of a fully kitted out phone system without all the extra charges! Switch to VOIP today, and bring your company up to speed with the crme de la crme of the corporate millennial crop!

Communicating with clients, customers, business partners and suppliers is an integral part of business operation. When it comes to choosing telephone systems as well as crexendo business telephone system. It is important for a company to choose a service that is dependable, you can load this page.
